

Introduction

The PG teaching program of M.S.Ramaiah Medical College has been an Annual event since last many years. The program is to ensure PG students are well trained and prepared to take the clinical exams. In these changing trends of newer and better care for the patient, postgraduate teaching practice has taken a back seat. It is unfortunate that we seemed to be governed by investigations and indications for surgery and not what is the need of the patient and the disease.

We would want our student to learn the Art, Craft and Science of Clinical practice so that management becomes easier and more relevant. We need to improve this skill so that we would do justice to our profession. The IOA President wants the postgraduate teaching to be uniform and of highest quality. It is the endeavor of the PG committee of IOA to improve teaching modalities at various places in the country. It is also an effort to have a common training program for post graduates to make them fully capable to appear for the exams confidently.

A two day postgraduate teaching program which includes a combination of didactic lectures, basic surgical Skill with clinical case discussions will be held on the 28th and 29th of March 2014. This will be an opportunity to discuss and resolve few of the controversies in clinical examination. The program is designed to bring in uniformity in teaching practices and also to educate the students with the latest advances so that they are well equipped for their exams and clinical practice.
